Note: The curves indicate the illuminated area and the average illumination when the luminaire is at different distance.

While our LED bulbs function with most dimmers and dimmers generally have a maximum 150-Watt rating for LED bulbs, we strongly recommend that you not exceed 80% of this capacity in order to avoid lighting flicker when the dimmer is at its lowest setting. For example, we recommend a maximum of 15 8-Watt PAR20 bulbs (total 120 Watts).
